## The Search is Over

Press release

### NeoFinder 7.5: Annotations for photos and videos

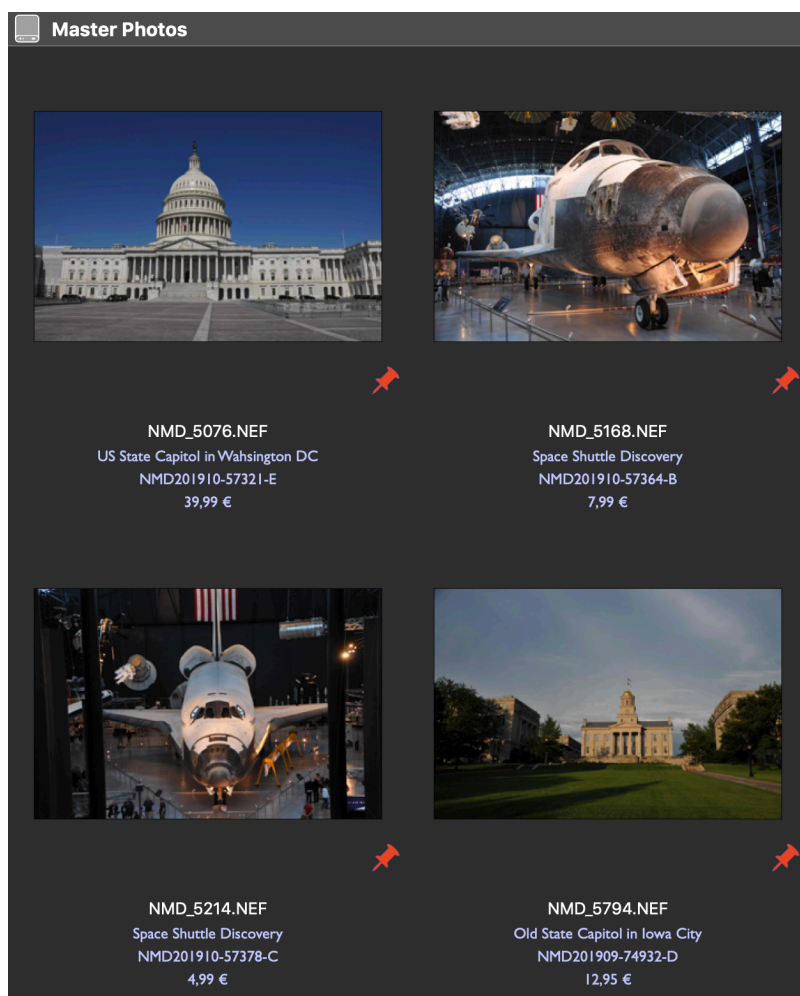

**Expanded AutoUpdater, certified for macOS 10.15, faster metadata editing**

*Bonn, November 6, 2019* – The new version of NeoFinder allows users to freely define and edit additional annotation fields for photos and film files. The Icon View can be instructed to show up to three of these additional fields or other metadata. The software is certified for macOS 10.15 and "notarized" by Apple. The search for faces and the improved navigation to the previous or next file directly in the Inspector makes it easier to edit metadata efficiently for large amounts of data. New AutoUpdater options allow catalogs to be updated at program startup, when a volume is mounted, or on specific weekdays.

The new version is free for NeoFinder 7.x customers.

## Annotations for photos and videos

In addition to the normal metadata fields, users can define and edit their own custom annotation fields in the Inspector. This data is stored in the XMP standard, with NeoFinder using the Phase One MediaPro compatible format. This data can also be cataloged from existing files, or imported from iView XML import files. The Icon View displays up to three of these fields, in addition to other metadata the user wants to see.

## Ready for macOS 10.15

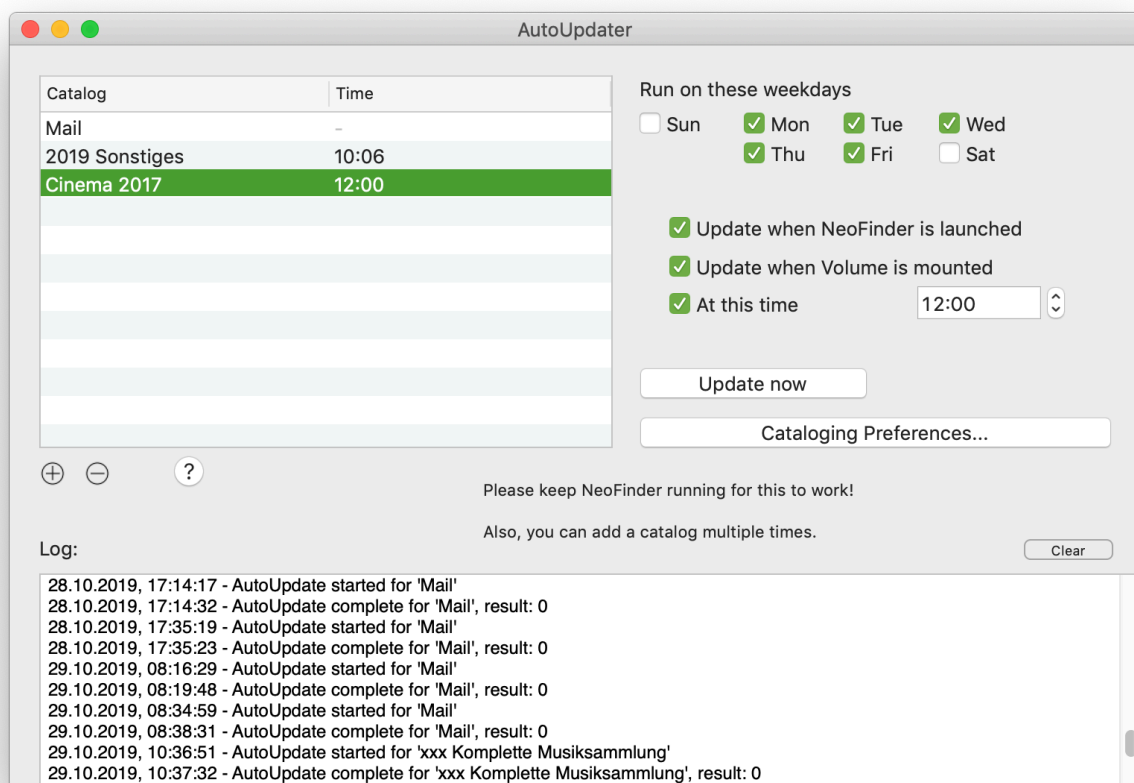

NeoFinder 7.5 is not only "notarized", but also supports the new folder protection cages introduced in macOS 10.15, and can better catalog the newly separated system partition. All functions were checked in macOS 10.15, and if necessary corrected or improved.

## Find Faces

To support very large image archives, NeoFinder can search for faces, and mark the found areas in images in the Inspector. In conjunction with the XMP person metadata, users can manually tag the found images with faces with the appropriate person names.

## AutoUpdater

In addition to the scheduled update of catalogs (with the NeoFinder Business license), catalogs can now be updated automatically when NeoFinder starts, or when the corresponding volume is mounted. In addition, you can decide for each day of the week whether the update should take place or not.

## Pricing and Availability

The new version will be released on November 6, 2019.

NeoFinder can be downloaded free of charge from the NeoFinder website, and all features can be unlocked with the appropriate licenses.

The single user license for private users costs 29 Euro, business licenses are available in different packages with additional features that can be combined according to the number of users.

## About NeoFinder

NeoFinder is the logical further development of the well-known cataloging program CDFinder and is therefore one of the oldest and most comprehensive cataloging programs for Apple's macOS. On the market since 1996, it has developed into a network-compatible cross-platform solution with its Windows twin abeMeda (formerly CDWinder). NeoFinder catalogs text, image, audio, video and many other file types, including numerous metadata from various file media. The handling is Mac-typically very simple. The cataloging process takes place almost automatically and search results are available in seconds - thanks to multi-core search and Spotlight integration including all local, non-cataloged, files. The integrated XMP editor can be used to add metadata such as keywords, descriptions, ratings or copyright notes to images or movie files.

In addition to the Mac version, NeoFinder is also available for iPhones and iPads, as NeoFinder for iOS.

In addition to standard data, the information in the catalog also includes a lot of other information such as metadata of pictures or album, title, artist and year for music CDs - data that cannot usually be found on a music CD. Photos and videos with geo-tags are accompanied by a map. NeoFinder also

catalogues the contents of Zip and other archives. The search options are extensive, but so transparent that even newcomers can easily use them.

Files found can be easily copied by drag&drop from the result window to the desktop or other directories. With so much ease-of-use it's not surprising that, in addition to more than 63,000 private users, advertising agencies like Jung von Matt, newspapers like the New York Times, companies like the BBC, Disney, music studios like Abbey Road Studios, or research institutions like NASA also like to use NeoFinder.

NeoFinder is used by more than 94,000 users in 102 countries, from single user to site licenses. Among others, it is used by the University Hospital Munich, Disney, Apple, BBC, VW, HR, WDR, Premiere and Pro7, Suhrkamp Verlag and Bayer AG.
