NeoFinder 7.8: MP3-Info is back

AutoTags Inspector has a new interface – add GPS geotags to MP4 files – catalog Corel Painter RIF, Nikon Z7 II NEF RAW, and WEBP files

Bonn, April 7, 2021 – Released today, NeoFinder 7.8 contains a large number of improvements in different areas. MP3-Info related file renaming features have been added, connections to Bandcamp.com for song files, GPS GeoTags can be added to MP4 video files, cataloging of Corel Painter RIF, .webp image files, and Nikon Z7 II NEF RAW photos.
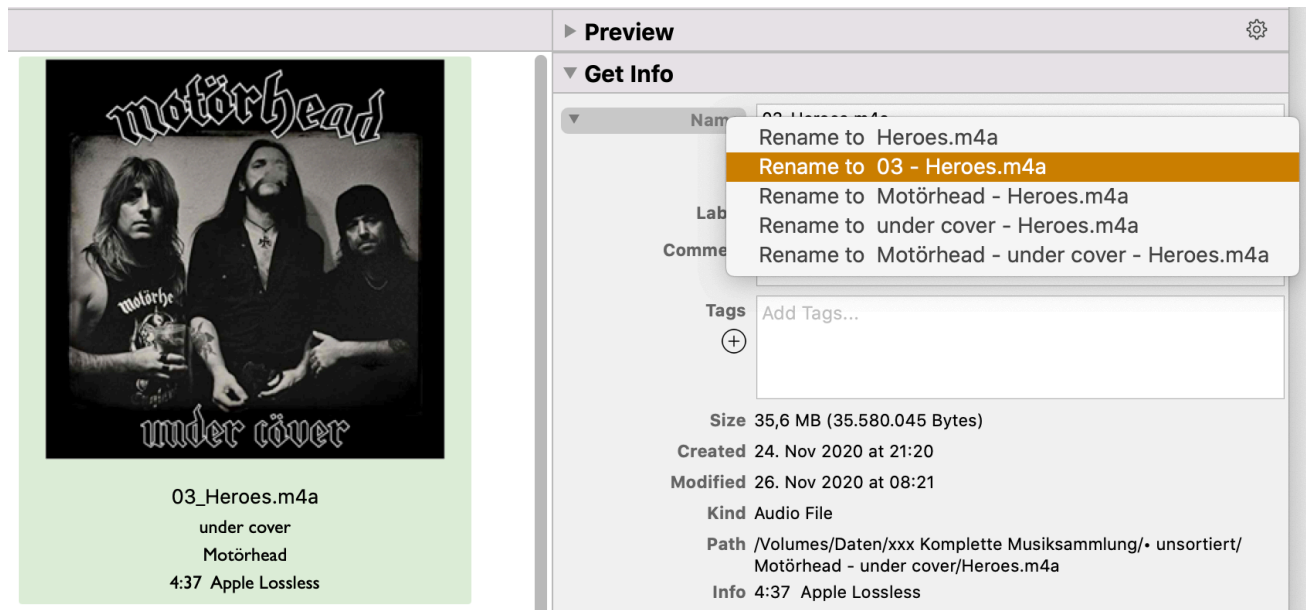

The new version is free for NeoFinder 7.x customers.

MP3-Info is back

MP3-Info was a very popular small application that displayed ID3 tags of audio files, and offered renaming options based on these tags.
NeoFinder has always cataloged, displayed, and search the ID3 tags, and now NeoFinder 7.8 offers the last missing feature: Renaming song files based on the ID3 tags embedded in them.

That works for single files, by using the Inspector menu of the file name.

Multiple files can be renamed at once, using new variables in the Multi Renamer.
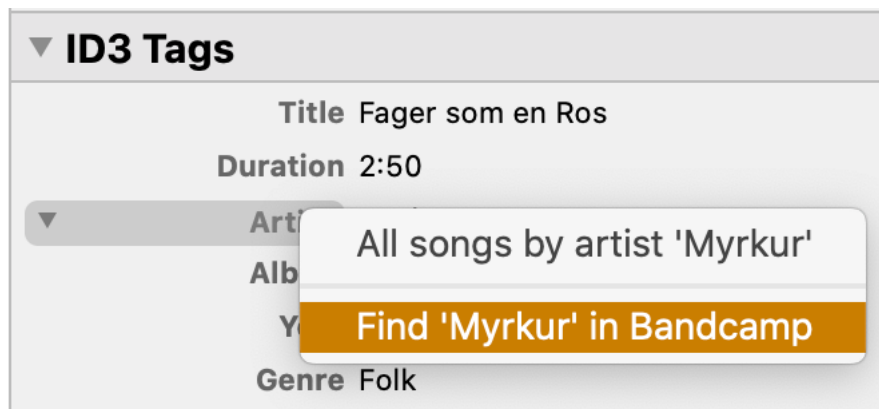

AutoTags Inspector

AutoTags are keywords that AI engines have discovered in an image analysis process. NeoFinder supports multiple different such engines.

The new interface of the AI AutoTags Inspector allows to add these tags to photos or videos with a single click:

Bandcamp.com connection

Inspector label menus allow to search for songs, artists, albums, and genre on Bandcamp.com with a single click.

Catalog Corel Painter .RIF

NeoFinder supports cataloging thumbnails of Corel Painter .RIF and .RIFF files, if the Corel Painter software is installed on the Mac that creates the catalogs.

Catalog Nikon Z7 II NEF RAW

NeoFinder 7.8 catalogs thumbnails and metadata of the new Nikon Z7 II NEF RAW format.

Entire list of all new features

- **MP3-Info is back!** You can rename audio files based on their ID3 tags. Also the Multi Renamer can use the ID3 tags in any way you may need!
- **AutoTags Inspector has an improved user interface** that allows you to assign keywords with a single click
- **Support for Nikon Z7 II NEF RAW** photos
- **Catalog thumbnails of Painter .RIF and .RIFF files**, if the Painter software is installed
- **Add GPS GeoTags to MP4 video files**
- Inspector Label Menu command to set the file creation date from the EXIF capture date, or XMP date
- Contextual menu to set the file creation date of multiple selected files from the EXIF capture date, or XMP date
- Inspector Label Menu command to search for ID3 Artist, Album, Song title, or Genre on Bandcamp.com
- Inspector Label Menu command to search for a video file name on IMDb, Wikipedia.org, or TheMovieDB
- Inspector shows the Aspect Ratio for video files
- Sort Menu can sort by XMP date, ID3 Title, Album, Artist, and Genre
- **Catalog thumbnails of WEBP files**
- Massively improved Album code helps with files stored on certain file servers that keep no file creation date
- Editing XMP metadata will preserve the file creation date and Finder Tags for the file
- Catalogs the paths of placed images and fonts (resources) in Adobe InDesign documents
- **Extensis Portfolio Importer improves** imports of older versions, utf8 export formats, multiple keywords, and more languages
- Albums update their display count when catalogs are deleted, and thus items removed from Albums
- Cataloging of Backblaze B2 buckets works with "secondary" API keys
- Improves cataloging of Canon CR3 files in certain older macOS versions
- Catalogs the text content of .applescript text files
- Broken Cross Windows XML Importer reads more catalog metadata fields and volume kinds
- XMP code in NeoFinder supports non-standard ".XMP" uppercase name suffix files which are created by Apple Photos.app

- Exporting many files first sorts the item list by catalog, to reduce the need for disk swaps
- Inspector shows the saved DPI value for JPG and some other image types
- ePub cataloging is more robust and supports files generated by Adobe InDesign
- Hidden preference to omit copying sidecar XMP files into the Finder
- Speed improvements when building the context menu for a large number of selected items
- Speed improvements browsing through items stored on remote volumes
- Improves handling of very large Adobe Photoshop PSB files
- Improves handling of cataloging XMP color labels from sidecar XMP files of certain RAW file formats
- Improves handling of special custom annotations field names
- Changing the Rating for more than 50 items shows a progress window
- Improves Gallery View when using the Go To Next or Previous item
- Find Editor shows the little extra menu for XMP keywords and persons, so you can search for empty or not-empty fields easier
- Works around a bug of macOS 11, where very dark or very light color labels didn't properly select the proper text color for better readability
- Improves handling of certain malformed ADC and Broken Cross Windows XML import files and shows error messages in these cases
- Renaming items in Albums works better
- Improved cataloging of certain ID3v2.4 tags in MP3 files
- Improved drawing of color labels for selected Albums in macOS 11
- Sorting List View by Duration sorts by numerical value, not the display string
- Fixes a problem copying and pasting certain XMP keywords and person lists
- Improves QuickUpdate for volumes that don't store file creation dates, such as some SMB servers
- Fixes a problem in the XML export for video channel infos and video subtitle information fields
- Fixes many minor issues

Pricing and Availability

The new version will be released on April 7, 2021.

NeoFinder can be downloaded free of charge from the NeoFinder website, and all features can be unlocked with the appropriate licenses.

The single user license for private users costs 29 Euro, business licenses are available in different packages with additional features that can be combined according to the number of users.

Cross-grades from other products are available.

About NeoFinder

NeoFinder is the logical further development of the well-known cataloging program CDFinder and is therefore one of the oldest and most comprehensive cataloging programs for Apple's macOS. On the market since 1996, it has developed into a network-compatible cross-platform solution with its Windows twin abeMeda (formerly CDWinder).
NeoFinder catalogs text, image, audio, video and many other file types, including numerous metadata from various file media. The handling is Mac-typically very simple. The cataloging process takes place almost automatically and search results are available in seconds - thanks to multi-core search and Spotlight integration including all local, non-cataloged, files. The integrated XMP editor can be used to add metadata such as keywords, descriptions, ratings or copyright notes to image or movie files.

In addition to the Mac version, NeoFinder is also available for iPhones and iPads, as NeoFinder for iOS.

In addition to standard data, the information in the catalog also includes a lot of other information such as EXIF, IPTC, and XMP metadata and thumbnails of photos. Album, title, artist and year for audio tracks and music CDs - data that cannot usually be found on a music CD. Photos and videos with geotags are accompanied by a map. NeoFinder also catalogues the contents of Zip, DMG, and other archives. The search options are extensive, but so transparent that even newcomers can easily use them.

Files found can be easily copied by drag&drop from the result window to the desktop or other directories and even applications. With so much ease-of-use it's not surprising that, in addition to more than 63,000 private users, advertising agencies like Jung von Matt, newspapers like the New York Times, television companies like the BBC, Disney, music studios like Abbey Road Studios, or research institutions like NASA also like to use NeoFinder.

NeoFinder is used by more than 97,000 users in 102 countries, from single user to site licenses. Among others, it is used by the University Hospital Munich, Disney, Apple, BBC, VW, HR, WDR, Premiere and Pro7, Suhrkamp Verlag and Bayer AG.
