Press release

NeoFinder 8.1 Ultra: Improved cataloging – Expanded Find Editor – Shared XMP Presets

Shared XMP Presets – Expanded Find Editor – Enhanced Light Table – EXIF Date Seconds – EXIF Metadata including GPS GeoTags from Nikon video files

Shared XMP Presets

NeoFinder 8.1 stores the XMP presets inside the database folder, so it can be shared and used by all other NeoFinder for Mac and abeMeda for Windows users that are connected to that database folder on a NAS or a file server.

Expanded Find Editor

New options to find photos taken in Summer, Winter, Autumn, and Spring. Option to find panoramic photos. Option to find photos taken at a particular day and month in any year, such as July 4, or December 25.

Enhanced Light Table

Better use of a trackpad to zoom and navigate with the pinch, swipe, and triple swipe gestures. More keyboard shortcuts to remove files, or show them in the Finder

EXIF Date Seconds

NeoFinder 8.1 now catalogs the seconds of the EXIF capture day, and allows you to use them for sorting, and renaming files in the Multi Renamer. The EXIF Date editor now also allows you to shift that capture date by minutes and seconds, to offset different time zones, and just small errors in the camera clock.

EXIF Metadata including GPS GeoTags from Nikon video files

Newer Nikon cameras, such as the Z50, record a lot of EXIF data in a proprietary special data field of MOV videos files. NeoFinder 8.1 can read and process that data for better cataloging.

NeoFinder 8.1 is a free update for NeoFinder 8.x users

The new version is a **paid upgrade** for NeoFinder or CDFinder customers who purchased their license **before** October **2020**.

Licenses purchased **after** October 1, **2020** will get this upgrade for **free**.

Pricing and Availability

The new version will be released on March 11, 2022.

NeoFinder can be downloaded free of charge from the NeoFinder website for a 30 day free demo. Afterwards, all features can be unlocked with the appropriate licenses.

The single user license for private users costs 29 Euro, business licenses are available in different packages with additional features that can be combined according to the number of users.

Cross-grades from other products are available.

About NeoFinder

NeoFinder is the continued development of the well-known disk cataloging program CDFinder and is therefore one of the oldest and most comprehensive digital media asset manager tools for Apple's macOS. On the market since 1996, it has evolved into a network-compatible cross-platform solution with its Windows twin abeMeda (formerly CDWinder).

NeoFinder catalogs text, image, audio, video and many other file types, including numerous metadata from various file media. The handling is Mac-typically very simple. The cataloging process takes place almost automatically and search results are available in seconds - thanks to multi-core search and Spotlight integration including all local, non-cataloged, files. The integrated XMP editor can be used to edit metadata such as keywords, descriptions, ratings or copyright notes to image or movie files.

In addition to the Mac version, NeoFinder is also available for iPhones and iPads, as NeoFinder for iOS.

In addition to standard data, the information in the catalogs also includes a lot of other information such as EXIF, IPTC, and XMP metadata and thumbnails of photos. Album, title, artist and year for audio tracks and music CDs - data that cannot usually be found on a music CD. Photos and videos with geotags are accompanied by a map. NeoFinder also catalogues the contents of Zip, DMG, and other archives. The search options are extensive, but so transparent that even newcomers can easily use them.

Files found can be easily copied by drag&drop from the result window to the desktop or other directories and even applications. With so much ease-of-use it's not surprising that, in addition to more than 63,000 private users, advertising agencies like Jung von Matt, newspapers like the New York Times, television companies like the BBC, Disney, music studios like Abbey Road Studios, or research institutions like NASA also like to use NeoFinder.

NeoFinder is used by more than 103,000 users in 102 countries, from single user to site licenses. Among others, it is used by the University Hospital Munich, Disney, Apple, BBC, VW, HR, WDR, Premiere and Pro7, Suhrkamp Verlag and Bayer AG.
